AMOS Project 5 - Planning Documents

Team Contract

Goals	Be Helpful & Respectful
	We and our customers are satisfied with the project results
	Not only satisfied with the product, also with the moral of and atmosphere in the team
	Improve efficiency over the semester
Meeting norms	Team Meetings are mandatory (Thursday, 12:30pm)
	Be on time
	Turn your camera on if possible
	Come prepared
Working norms	Primate of consensus, else voting, majority wins
_	Support your team
	Task assignments will be made clear and agreed upon by the end of weekly group meetings.
	Task can solved independently or in groups (pair programming)
	Give constructive criticism, dont make it personal
Coordination norms	Team meetings will be lead by the POs
	Assignments can be chosen based on preference if assignments are not voluntarily chosen the Product owner can assign tasks based on workloads
Communication norms	Our communication channel will be slack and we write respectfully
	Communicate over the corresponding channels
	Response at least in 24h
	Whatsapp as urgent channel
	Any discussion should be viewable to anyone that the discussion pertains.
	If you cannot participate or arrive late, write a message in slack beforehand if possible at least an hour before
	Ask for help if necessary
Consideration norms	Side conversations in separate slack channel
Consideration norms	Don't interrupt each other in the zoom calls
	Be considerate of others people time and communicate at your earliest convience
	If two people have a conflict choose mediator, for more people or fail group discussion
Cont. improvement norms	Kanban board, closed tickets and weekly deadlines are used to track progress
	Test and code metrics
	Assign default reviewer
	Master should always be runnable

AMOS Project 5 - Planning Documents

Team Contract

	Anyone can start a discussion about outcomes or notices from their assignments.
Rewards	Cake
	Drinks
Sanctions	Write Documentation
	Last place for task assignment
	Sanctions only by vote

AMOS Project 5 - Planning Documents

Product Goal

AMOS Project 5 - Planning Documents

Product Glossary

Term	Definition
Admin	The admin can create/delete users and assign roles
Consultant	The consultant is the main user of the software, which can conduct analysis, enter ratings and print charts.
Epic	An Epic describes several issues which are grouped as one topic
Evaluation view	An Epic describes several issues which are grouped as one topic
Issue	An issue can describe user stories, bugs, tasks or other types of issues.
Komplexitätskriterium/-treiber	Is a class of questions with the same topic
Kundenschlüssel	The customerID
Marge	The margin whichs displays the y-axis in the in the pie chart
Piechart (äußerer Ring)	The customer complexity, for each Produkt three fields for the percentage of hoch, mittel & gering complex customer is given.
Piechart (innerer Ring)	The distribution of Bewertungen of Produktvarianten for one Produkt.
Piechart (Größe)	The volume of the piechart displays the criteria "credit volume" in the economical evaluation
Produktbereiche	Every product area has to sub areas (private and corporate) & and there are 1 to n products for each product area
Produktschlüssel	The productID
Produkt	Every product has one to n product variants, which are divided in product areas.
Produktvariante	One or many Produktvarianten are forming the Produkt; The Produkt is a Produktvariante of itself; Exp: Sofortdispo, Dispo Fix & Dispo Variabel
Rating	Hoch, Mittel & gering (with colours: red, yellow & green); is set by a consultant
Result view	The webpage with the charts
Projekt	A Projekt has one or many Produkte; Each Projekt has 1-n Produktbereiche
User	A User is ther overall class for Consultant, Admin and Project Manager
User Story	A user story is a describtion of a software functionality
Gesamteinschätzung wirtschaftliche Bewertung	This value is used to determine the economical complexity of Produkt or a Produktvariante; This value is displayed in the inner piechart ring

Impediments Backlog

Sprint	Status	Source	Impediment	Resolution
				All members posted a screenshot of the happiness tool to Slackto verify the
1	Resolved	Maximilian R	Not all members could use the happiness tool	properly used the hapiness tool
1	Resolved	Maximilian R	Late appointment with the industry partner (one day before sprint meeting because of their vacation)	Early communication because they are not on vacation anymore
1	Resolved	Andreas Ronellenfitsch	Chaotic settling-in phase	Defined a working process
1	Resolved	Andreas Ronellenfitsch	Use of designated Slack servers	Definied a Slack server for each topic
2	Resolved	Maximilian R	The feature creation process was a little unstructured	Feature creation process at least 3 days before group meeting
3	Resolved	Maximilian R	External requirements regarding the exact definition of "product" & "product area" was unclear and blocked some tasks	Meeting with Theo on 10.11.2021 solved those terminologies (Glossary)
4	Resolved	Tobi	Code review proces is currently unclear	Was resolved by scrum implicitly
4	Resolved	Ines	Clarification needed on product area definition	See answer from Andreas in slack
4	Resolved	Maximilian R	1 Software Developer (Frontend) dropped out	Splitting the team in fixed frontend and backend teams in the next meeting (18.11)
6	Resolved	Patrick G.	Tickets could not be finished	<ul> <li>- Ivan dropped out -&gt; POs support with smaller development tasks</li> <li>- unforseen complexity as well as sickness of a teammembers</li> <li>- watch for one more week and maybe split tickets into frontend/backend if it's not resolved</li> </ul>
6	Resolved	Team	Complexity of frontend tickets still uncertain	- Split frontend tickets further (functional -> fancy different components) - Max is going to support front-end from now on
6	Resolved	Team	Communication between front- and backend	- additional (optional) problem specific meetings to solve issues on monday
7	Resolved	Ines	Changes were not communicated and led to merge conflicts	- Communication before changing something (frontend/backend)
8	Resolved	Max B	Product Glossary is unclead and definitions are too long	- Reworken & shorten the product glossary with at least two persons
8	Resolved	Alex/Tobi	API-endpoint definiton is/was not clear	- Plan Meeting between front- and backend to get a clear definition
9	Resolved	Max R./Tobi	Some issues are based on to old code/ exists to long	- Create smaller issues/ perhaps update old isssues
10	Resolved	Tobi	CORS Config blocked requests to backend	- Make ticket to adress CORS config
11	Resolved	Lily	Some Bugs occured	- Create adressed tickets/ -Click through software and "find" those bugs (manual testing)
12	In-work	Alex	No overview over all dependecies in backend	-Create ticket or is part of documentation tickets
12	In-work	Andreas Ronellenfitsch	Bug while creating project	- Create ticket to solve that
12	In-work	Max R/Max B	Happiness Index does work sometimes	- Won't fix, write email to Riehle

AMOS Project 5 - Planning Documents

Definition of Done

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	Approved by product owner	Approved by product owner	Approved by product owner
	Tests have been written (e.g. Unit test, integration test etc)	100% tests passed (Backend)	No critical bugs
	Code has been peer reviewed and approved	No critical bugs	User documentation is written
	No syntax or runtime errors emerged	Merge conflicts solved	75% test coverage (backend)
	Code has to be included in the release candidate	Demo approved by team	Demo approved by team
		Code is deployable using docker	Code is deployable using docker
		Code in a clean state	Approved by business partner
			Code documentation is written
			Build & deployment documentation is written
			Documentation has been peer reviewed

Bill of Materials

Context	Name	Version	License	Comment
1 Backend framework	Spring (Boot)	2.5.6	Apache License, Version 2.0	Used for REST API and microservice architecture
2 Backend JavaScript Runtime Environme	ent Node.js	14.16.0	MIT	https://nodejs.org/en/
3 Backend orchestrator	Docker-Compose	1.29.1	Apache License 2.0	For defining and running multi-container Docker applications
4 Backend programming language	Java	17	Oracle JDK	
5 Backend runtime	Docker Engine	20.10.06	Apache License 2.0	Docker engine is used to run applications in a container
6 Backend Testing	JUnit	5	Eclipse Public License	Unit testing framework for the Java programming language
7 Database	HyperSQL	2.6.2	BSD License	Deployment of database applications
8 Deployment	Github Actions		-	CI/CD Tool for running automated tests, building docker images and deployment.
9 Deployment	Docker CLI	20.10.06	Apache License 2.0	Tool to build containerized applications as docker images.
10 Frontend framework	React	17.0.2	MIT License	UI Framework and handler for the view layer of web and mobile apps. It is a Frontend JavaScript library.
11 Frontend programming language	HTML	5	GNU Project License	Markup language for documents designed to be displayed in a web browser.
12 Frontend programming language	CSS	2.1		Style sheet language used for describing the presentation of a document
13 Frontend programming language	JavaScript	ES2015	GNU Project License	Programming language for Web development
14 Java Runtime	OpenJDK	11.0.11	GNU GPL v2	with linking exception
